

1 April 2023

Implementation of Autodesk Fusion 360 as our digital tool of choice for seamless design and production across multiple disciplines

Customer Challenge

As a leader in the South African Injection Moulding Industry, designing and manufacturing across 6 brands, PIMMS needed an integrated Design and Manufacturing tool which would allow our teams to design, innovate and manufacture whereby reducing the need for change and improving the speed to market – exactly what our customers need effectively and efficiently.

PIMMS Manufacturing Goals

Priority goals identified were as follows:

- 1) To be the South African Market Leaders in Injection Moulding manufacturing
- 2) To be the fastest to market with existing and new products

Solution

By implementing Autodesk Fusion 360 and Fusion 360 Manage, PIMMS were able to provide an integrated platform for both design and manufacture. We were also able to track, manage and report back on the progress of each brand development as it moved through the product lifecycle. This allowed for timeous decision making by Management and the reduction of design change. Autodesk Fusion and Fusion Manage opened up silos of information which were now available to team members to effectively collaborate

Business Outcome

Increased ability to integrate teams and departments.

Improved decision-making resulting in design and manufacture efficiency gains.

Conclusion

Modena OneSolve was our clear partner of choice for this implementation. They provided onsite advice as well as onsite customised training specific to our needs. Their team was highly skilled in sharing knowledge and getting the PIMMS team.
