RE: Customer Feedback Regarding Training on the Utilization of AutoCAD Plant 3D.

Dear Modena OneSolve,

LEOKA would like to express our sincere gratitude for the training provided by Modena OneSolve on AutoCAD Plant 3D recently. The knowledge and insights gained during the training have been invaluable, and we appreciate the dedication and effort demonstrated by the trainer.

The Plant 3D package proved to be immensely beneficial, especially in its ability to seamlessly integrate with other software packages we utilize for producing drawings and 3D Models. Of particular significance was the inclusion of training on generating smart P&ID's. Although it is still early days, we are confident that our Drawing Office is now well-equipped and knowledgeable in utilizing the software effectively going forward.

We have found AutoCAD Plant 3D to be user-friendly, particularly in its compatibility with AutoCAD Advanced Steel, which is one of our primary software packages. Additionally, its efficiency in generating 2D views from 3D models has significantly improved our workflow.

Once again, thank you for providing us with the training opportunity. We anticipate applying the knowledge gained and are grateful for the opportunity to seek further assistance from the trainer should our team have any queries regarding the software.

Regards,
